Terms on your statement

Electricity: This is the cost of the electricity supplied to you during this billing period and is the part of the bill that is subject to competition. **Delivery:** These are the costs of delivering electricity from generating stations across the province to London Hydro, then to your home or business. This includes the costs to build and maintain the transmission and distribution lines, towers and poles and operate provincial and local electricity systems. A portion of these charges are fixed and do not change from month to month. The rest are variable and increase or decrease depending on the amount of electricity that you use. The delivery charge also includes costs related to electricity lost through distributing electricity to your home or business.* London Hydro collects this money and pays this amount directly to our suppliers. * When electricity is delivered over a power line, it is normal for a small amount of power to be consumed or lost as heat. **Equipment,** such as wires and transformers, consumes power before it gets to your home or business. **Regulatory Charges:** Regulatory Charges are the costs of administering the wholesale electricity system and maintaining the reliability of the provincial grid. **Global Adjustment:** Electricity generators in Ontario receive a combination of payments from the operation of the wholesale market, payments set by

regulation and payments under contracts. Your portion of the net adjustments arising from these and other authorized payments is included on your bill as the Global Adjustment. Note: For a detailed explanation of electricity terms, please visit
